Bank Shot patented technology enables the account holder to review each check prior to depositing in a secure portal.

## REJECT

If an account holder receives a check in error, they can simply reject the check. This is the same as ripping the check up and throwing it away.

## HOLD

If account holder isn't sure where a check came from due to not having all knowledge of a contract, they can place a hold the check. By doing this, we provide more time for additional information to come in while avoiding adding extra steps for the user.

## **ACCEPT**

Account holder can accept a check and decide what account to deposit it in. When the check is accepted all parties receive an electronic receipt verifying the date and time of deposit.

## **PATENTED PORTAL**

Bank Shot is the only electronic check solution that enables the account holder to review each check prior to depositing, with its stop light process of depositing on green, holding on orange and rejecting checks on red, the latter being the equivalent of a check torn up or never presented.

This assures that no transaction takes place until the account holder decides to move forward with the deposit.

Bank Shot's patented technology ensures that our customer has complete control of the deposit from start to finish.
