

INFRASCALE DISASTER RECOVERY

Avoid downtime when disaster strikes, hardware fails, or ransomware infects your systems. Infrascale Disaster Recovery lets you instantly recover your data & systems by spinning up virtual machine replicas either locally or in the cloud.

Key Features & Benefits

15-Minute Failover Guarantee

Our disaster recovery service guarantees a 15-minute failover. You can bring any system back online, in our cloud, from the time of disaster – in 15 minutes or less.

Failover to the Cloud

For Windows and Linux environments, virtual or physical, administrators can boot up VMs from the local appliance or our cloud, with RDP or VNC access.

Drag-and-Drop Orchestration

Use our drag-and-drop, graphical orchestration workflow editor, also known as a runbook editor, to specify the order in which machines are recovered, create groups of machines to boot simultaneously, and specify time intervals between system boots to ensure a smooth, stress-free system recovery.

Software Defined Networking

Infrascale Disaster Recovery rebuilds your network automatically and on the fly using software-defined networking technology – effectively capturing a complete replica of your on-premise data center in the cloud.

Radical Transparency

We publish our actual recovery times to document just how fast we can recover systems. Check out our CloudBoot™ Histogram and discover the fastest DRaaS solution on the market.

Any Cloud

Replicate your data to Infrascale's cloud, a private cloud, or third-party clouds such as Google Cloud, AWS, Azure, or IBM Bluemix.

Key Features & Benefits (Cont.)

Guilt-free Disaster Recovery Testing

Perform unlimited Disaster Recovery tests without having to formally declare a disaster or incur additional costs. Our orchestration functionality lets you test system dependencies before a real emergency hits.

Disaster Recovery for Linux

If you're running Linux in your environment, you can failover locally or in the cloud. Infrascale Disaster Recovery supports Red Hat, CentOS, Debian, and Ubuntu server operating systems.

Recovering Virtualized Environments

Backup physical machines and recover them to existing hypervisors, or recover VMs as physical machines (P2V and V2P recovery support). Set policies to automatically discover and protect newly created VMs to save additional time and money, and reduce risk of downtime.

Local Disaster Recovery

For micro disasters and small server crashes, it's often faster to spin up VMs on the local appliance. In a matter of minutes, administrators can have VNC access and use a live, running machine. Operations can quickly fail back by powering off the VMs and restoring it back to the production environment.

Use your Existing Hardware

Looking to leverage your existing data center infrastructure? No problem. The on-premise component of Infrascale Disaster Recovery is also available as a VMware and Hyper-V virtual appliance.

Central Deployment

All system components can be deployed directly from the Infrascale dashboard. System configuration and management can also be performed centrally, regardless of how distributed are the systems to be protected.

Infrascale is a provider of the most powerful disaster recovery solution in the world. Founded in 2011, the company aims to give every company the ability to recover from a disaster- quickly, easily and affordably. Combining intelligent software with the power of the cloud is how Infrascale cracks the disaster recovery cost barrier without complex, expensive hardware enabling any company to restore operations in minutes with a push of a button. Infrascale equips businesses with the confidence to handle the unexpected by providing less downtime, greater security, and always-on availability.

HOW TO BUY

Need a quote? Need help finding an Infrascale Reseller?

Contact us at **1-877-896-3611** and one of our DR and backup consultants can provide a custom quote or direct you to a qualified reseller.
